

Inset helipad lights **AV-HLI2** are an excellent choice for locations where elevated lights are not suitable or can cause interference to passing aircraft and maintenance vehicles.

Key Features:

- Optimised light output with optional IR
- Compact and low profile, <10mm (0.4")
- Integration Optimised in elevated helipads
- Fully sealed optics and electronics
- Safe Extra Low Voltage compliant
- Existing infrastructure compatible

IR available

The lights can be dimmed to reduce glare and are available with optional infrared (IR) visibility for pilots using night vision.

Robust Construction

Able to withstand the harshest environments, the unit is made from robust, corrosion-resistant anodised aluminium with a UV-stabilised lens with excellent impact resistance, thermal stability and transparency. The electronics are fully encapsulated for further protection.

High efficiency LEDs with over 100,000 hour life expectancy are used ensuring the lights are long lasting and low maintenance.

Plug & Play Design

The inset helipad lights are compatible with existing infrastructure and come with a simple plug and play connection making them simple to install.

Optional Heliport Lighting System

An optional Heliport Lighting Control (AV-HL-CTRL) can be supplied and integrated with the inset helipad lights to provide central control and/or remote operation functionality for a variety of helipad operations.

ICAO Compliant

Designed to meet the standards of ICAO Annex 14 Volume 2 and FAA Engineering Brief 87 Heliport Perimeter Light for Visual Meteorological Conditions.
